

Meeting the needs of the future...

# Genepacker 90

## Genes that pack performance...

- Docility – for ease handling
- Prolific indoor parent gilt
- High voluntary feed intake enhances reproductive traits
- Large, vigorous litters
- Even piglet growth
- Lean progeny for top grades

**...mothering where it matters**

Licensed to the PALI Group

# Genetics you can trust

**JSR Genetics, one of the three largest breeding groups in the world, continuously works on the development of products that meet the demands of all parts of the pig-meat production chain.**

**Due to the rapid changeover of high-health boars on nucleus and multiplication farms, maximum genetic potential can be realised on commercial farms.**

The production and sales in The Netherlands and Belgium is exclusively licensed to JSR Netherlands and JSR Belgium. Both organisations have an enthusiastic and experienced team of multipliers, salesmen and technicians.

JSR Netherlands and JSR Belgium both belong to the PALI Group, a group of companies that focuses on the production of veal, kid goat meat and the buying and selling of livestock (veal calves, bulls, pigs and goats).

The PALI Group, with establishments in the Netherlands, Belgium, Germany, Italy and Spain, works within the controlled production chain with a large number of established clients and stable marketing patterns.
